

Please re-visit the over 5,000 comments that have been submitted stating how users of the shortwave spectrum (government, military, ham, commercial marine, commercial airline etc.) will suffer horrendous interference caused by deployment of BPL. As but one example of numerous inaccurate statements made by BPL proponents, "electrical wires don't radiate like antennas when carrying radio frequency energy" violates every law of physics. In the best interest of shortwave spectrum users, I ask that you delay any decisions on BPL until you have sufficient, valid data in your possession in order to carry out a thorough study.
